

Methods of retaining the spices in a mill's reservoir.

- Using a plug with a silicone washer

Sealing O ring are made from silicone. The rings require a 1/16" (2mm) wide recess in the turned filler plug . This is usually achieved by using a 1/16" (2mm) parting tool.

The silicone sealer is 1" (25mm) diameter with a 3/8" (10mm) hole in its centre.

The diameter of the part which fits into the 1" hole at the top of the mill should be as near as 23mm as you can get it, not an equivalent imperial measurement.
